# Chapter 1

## Introduction

### 1.1 General Notes

- For each variable, four pieces of information are provided:
  1. The variable name, enclosed in [brackets].
  2. The variable description, listed next to the variable name.
  3. A frequency distribution.
  4. Select summary statistics, depending upon the level of variable:
    - (a) For nominal (categorical) level variables, the mode (most commonly occurring value) is provided. Multiple modal values may be provided, up to a pre-determined maximum. If the number of modal values exceeds this pre-determined maximum, reporting of the mode is suppressed and an explanatory note is provided instead.
    - (b) For ordinal level variables, both the mode and the median (middle value) are provided.
    - (c) For interval or ratio level variables, the mode, median, mean, and standard deviation are provided.
- Variables are listed in order of their appearance on the questionnaire.
- Negative category labels indicate various forms of missing data:
  - 3 Missing (No response was provided.)
  - 2 Not applicable (Item is not applicable to respondent.)
  - 1 Do not know (Respondent marked *Don't know* as response.)
- Missing values are *excluded* from calculation of summary statistics.
- *Response rate* is calculated by dividing number of valid responses (i.e., non-missing responses) by total number of responses. It does not include institutions that did not respond to the survey.

## 1.2 Errata

- The variables on housing allowances for faculty members [hou\*] have unusually low response rates due to an oversight in the construction of the question. Specifically, I neglected to include a "We do not provide housing allowances to any faculty members" response, making it impossible to distinguish between those institutions that do not provide housing allowances and those institutions that did not answer this question. When reviewing these variables, it is important to interpret the numbers as "Of those programs that provide a housing allowance to at least one faculty position, a certain percentage provide a housing allowance to this specific faculty position."
- Originally, questionnaires were also sent to a number of Canadian programs. However, due to an extraordinarily low response rate from these institutions, they were dropped from the final dataset.

## 1.3 Participating Programs

Note that the number of programs listed below does not match the total number of respondents because one respondent failed to provide any identifying information. The data for this institution is included in the final dataset, coded with an identification number (UID) of 999.

1. Andrews Univ, SDA Theological Seminary
2. Asbury Theological Seminary
3. Baylor Univ, Dept of Religion
4. Boston College, Theology Dept
5. Brandeis Univ, Dept of Near Eastern and Judaic Studies
